6. AI-Generated Summary Paragraph

The comparison identified 3 changed regions between the two images, affecting approximately 47.76% of the total image area. The most significant change is located in the top region (region #1), covering about 35.381% of the image. Additional changes were detected across the top and center areas of the frame. Overall, the modifications are classified

as extensive in extent (structural similarity score: 0.5365). Confidence in these detections is low.
