---	--------	------------------	-----	------

6. AI-Generated Summary Paragraph

The comparison identified 8 changed regions between the two images, affecting approximately 11.43% of the total image area. The most significant change is located in the center region (region #1), covering about 5.036% of the image. Additional changes were detected across the center, top, bottom-left and top-left areas of the frame. Overall, the modifications are classified as moderate in extent (structural similarity score: 0.8397). Confidence in these detections is low.
