6. AI-Generated Summary Paragraph

The comparison identified 2 changed regions between the two images, affecting approximately 49.82% of the total image area. The most significant change is located in the center region (region #1), covering about 89.793% of the image. Additional changes were detected across the center and top areas of the frame. Overall, the modifications are classified as extensive in extent (structural similarity score: 0.5365). Confidence in these detections is low.
